

BUS SPEED HUMP CUSHION

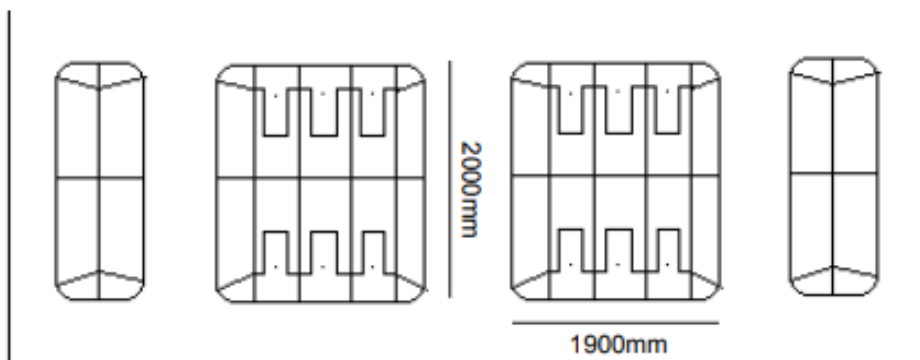

Modular Bus Speed Cushions

Traffic speed cushions are designed to ensure minimal impact to local busses and emergency vehicles, whilst reducing the speed of vehicles; reducing the risk of accidents, in your local streets.

The product with its modular design can also accommodate for various road widths, as may be the need, with little effort and fuss.

Recommendations

Avoid using side Kerb islands and signs, to prevent accidents. We would recommend the use of side cushions. This would also solve the problem for those street sweepers, and not hinder busses.

Installation

Quickly and easily placed and fixed to the road; the design boasting again of its consideration to minimal disruption to traffic, avoiding those long and expensive road closures. The benefit over asphalt humps is obvious; if later you decide relocate the speed control device.

Notes

Comes in black and white
