

Rubber Speed Hump

Product Description

Rubber Speed Humps are made from recycled rubber. Rubber is lighter and easier to work with than asphalt and concrete, significantly reducing installation time. Rubber pieces can be pulled up and relocated without being destroyed.

Polite Urban Infrastructure's rubber speed humps are time-saving to install and require little to no disruption to traffic. 50mm or 75mm high speed humps come in black & white or black and yellow options.

Key Features

- Embedded reflective material increases visibility and safety, day or night
- All-weather easy maintenance: will not warp, chip, crack, crumble or corrode
- Extremely durable and tough enough for heavy traffic
- Flexible so it can conform to road curvature and any concrete surface
- Resistant to extreme temperature variations, U.V., oils, moisture and damage
- Available as a 4 or 6 panel kit
- Comes in black & white or Black & yellow
