- Size
Can be adapted to
any specification

Quality Control

Some of the construction materials used for our bus shelters include, but are not limited to; high strength steel posts, corrosive free aluminum, and powder coat. Please ask us for any custom requirement.

Our innovative design team is continually expanding our product offering and regularly consults with architects, engineers and local government authorities to provide functional solutions to our valued clients.

Installation Services

Our fully trained and experienced installation team offers an unsurpassed level of service with minimum disruption to pedestrian or traffic flow.

All work guaranteed

After sales service

Superior quality at a competitive price

Our wide range of products can be seen around the world, helping our customers meet their traffic and safety requirements.

We specialise in the development of a wide range of both standard and customised Bus Shelters, designed to complement the surrounding environment and infrastructure. Manufactured in Australia for Australian conditions, our shelters provide unique alternatives that enhance the urban landscape.

Our innovative design team is continually expanding our product offering and regularly consults with architects, engineers and local government authorities to provide functional solutions to our valued clients. Australia's major companies, government utilities, councils, hospitals, universities and airports.
